## **WELCOME MESSAGE**

***Dear Colleagues,***

***It is our great pleasure to invite you to the 2011 edition of our annual scientific congress, known as “The Days of the Socola Hospital”, which has become a tradition of our hospital. This year we have chosen the theme “The Multidimensionality of Psychiatric Care. Models of Community-Based Psychiatric Care”, as it is important for both medical world and civil society.***

***Promotion of mental health and prevention of mental disorders are addressed to the individual and to the family, to the community and to the determinant social factors by strengthening the protective factors and reducing the risk factors.***

***Helping the persons with mental disorders represents an obligation for the society and, thus, they have to be encouraged to have the control over their own actions. Empowerment is both an important element of human development and a task for the society. The deinstitutionalization of people with mental health problems and the development of community-based mental health services favor the psychosocial reintegration in an obvious way.***

***At the present time, an increasing number of countries are implementing effective community-based services. In this regard, a special consideration should also be given to the emotional, economic and educational needs of the mentally disabled person’s family, who is most of the times responsible for the care and offers emotional support.***

***We welcome you to Iași and we are looking forward to having you by our side in our efforts to improve the quality of life for the people with mental disorders.***

***Professor Vasile Chiriță, MD, PhD***

***Professor Călin Scripcaru, MD, PhD***
